

What to look for when buying a magnetic field therapy unit.

There are so many manufacturers on the market at present offering various systems and units. It is often difficult for the layman to separate the wheat from the chaff. The price should not be the most important factor – look for the following points:

Your personal checklist

What to look for in a good magnetic field therapy unit		Medithera
Which certificates does the system have?		DIN EN 13485; DIN EN ISO 9001:2000
Where is the system manufactured?		Quality system made in Germany
Is the system recognised as a medical unit?		Yes. Medithera Systems are recognised throughout Europe
Important: Which frequencies does the system use?		Medithera signal – the only unit to use pulse-pause modulation
Can the intensity of the signal be precisely measured and can the frequencies be altered?		Yes
Is it possible for the doctor to control the therapy?		Yes – the doctor can define specific therapy programmes for each individual patient by using the doctor patient system, can apply these to the TherapyCard and can control the therapy using the TherapyCard..

What to look for in a good magnetic field therapy unit		Medithera
How are the coils in the coil mat arranged?		So that no spaces appear in the magnetic field Medithera systems have 26 coils with a combined length of 78 metres.
Does the system have a self-test function?		Yes. Every time the system is turned on the electronics, mat and pillow are checked.
How is the system marketed?		Medithera systems are only sold by qualified personnel.
Is there a hotline for questions about the system and its use?		Yes – for doctors, patients and private users.
